Elicitation Stage –

Users:

User 1: Lucas Yeung, z5588886@unsw.edu.au (COMP1511 Student)

User 2: Matilda Neame, tilly.neame@gmail.com (USYD Pysch Student)

User 3: Ellen Garbarino, ellen.garbarino@sydney.edu.au (USYD Marketing Professor)

Questions:

1. Have you used kahoot as an admin and or player?

User 1 Answer	User 2 Answer	User 3 Answer
Yes, only as a player.	Yes, only as a player.	Yes, only as an admin.

2. When you use kahoot, as a player and or admin, is there anything you don't like, or think could be improved?

User 1 Answer	User 2 Answer	User 3 Answer
I often struggle when playing the quizzes because I can't read the questions in time.	Sometimes I'm playing a quiz, and I wish there was a way to save individual questions.	One of my main issues with kahoot, is that there isn't any sort of library system where I can store and organise questions into topics, so that at any point I can come back and find a bank of associated questions to put into my new quizzes.
User 1's Suggested Solution	We can update the way we create question timelimits to have a base time, but then add to the timelimit proportionally depending on the character length of the question.	

3. Following up on User 2 answer's, would you want just the questions in a databank, or would you want the associated quizzes as well?

I want the questions and the associated quiz name, but not the whole quiz.	
Suggested Solution	Since player's don't currently have any way of storing information, we can have an option to sign in as an admin at the end of the quiz, and then admins will be able to store the questions, and their associated quiz.

Future Planning Document

4. Following up on User 3 answer's, if there was a database of questions, what information would you want to be able organise the questions by?

I would want to be able to sort the questions by their quiz name, the time their content was last edited and if I have played the quiz with my class, I would want to see what percentage of the students got it wrong.	
Suggested Solution	We could make a new structure in dataStore that has the above information about a question, and then have separate functions that sort through this databank using one of the features.

5. Finally, is there any other functionality that we have not discussed which you think could be useful?

User 1 Answer	User 2 Answer	User 3 Answer
As an admin I would want to be able to display the final quiz results in different chart formats. For example, a pie or bar chart.	As an admin I would want to be able to turn the chat function off.	Not really, I prefer simplicity.
Suggested Solution	For User 1's answer, we could have a couple of chart format options, (where one is the default) and then just let the admin click a button if they want to change the format. For User 2's answer, we could just have a lock property and just have the admin have a toggle button.

Analysis & Specification Stage –

User stories:

As a player, I want plenty of time to read the questions so that I can answer right when the answers appear. Acceptance criteria:

- All questions must be in the question reading stage for at least 5 seconds
- For questions that are longer than 20 characters, extra time is added proportionally for each additional character.

As a player, I want a way to store the questions I have played so that I can go back and review them before tests. Acceptance criteria:

- After a quiz has ended, I am able to see a list of the questions
- From this list I can then select which questions I want to store
- At any point after this I can view my databank of questions
- I can also create a new quiz and copy these questions into it

As an admin, I want to be able to store and sort the questions I have made so that I can easily reuse them in other quizzes.

- I can choose to store a question I have created
- At any point I can view my databank of questions
- In my databank I can sort my questions based on the following properties: quiz name, time last edited and percentage of players who got it wrong.
- I can also create a new quiz and copy these questions into it

As an admin, I want to be able to disable the chat function so that I can ensure that my students are concentrating on the quiz.

- Before I start a quiz session, I can turn the chat off
- During an active quiz session, I can turn the chat off
- If the chat is off at any point, I can also turn it back on

Future Planning Document

Use Cases:

Name:	Update question time limit
Primary Actor:	The admin user
Background Information:	We are changing the way that we organise question reading time limits, specifically in the question_countdown stage. Currently the admin who creates the question simply sets a number as the timelimit, but now it will be more dynamic and proportional to the length of the question itself
Rationale:	This change is based off of feedback we received from potential users who said they had difficulty reading the questions in time
Preconditions:	A logged in admin user creates a valid question, not including a timelimit. Additionally, including the newly generated timelimit, the sum of all question timelimits are under 3 minutes
End Conditions:	Successful end – The question timelimit for the question_countdown stage updated successfully Failed end - The question timelimit does not change
User Functionality:	The user does not have to do anything other than create questions

Name:	Disable the chat feature
Primary Actor:	The admin user and players
Background Information:	Currently players can view and send messages in a chat to all players in an active quiz session.
Rationale:	This change is based off of feedback we received from potential users who said they would want to be able to disable the chat feature so that players would be more focused. This is particularly useful for classroom applications of toohak
Preconditions:	An admin user is logged in, and a valid quiz session has started, it can be in any stage
End Conditions:	Successful end – Players can no longer send messages in the chat Failed end – Players can use the chat feature as normal
User Functionality:	The admin user presses a button to disable the chat feature at any point during an active quiz session. Players can no longer send messages

Future Planning Document

Validation Stage –

User 1: “Yeah everything looks pretty good, I hadn’t acually thought of making the question time limits be propotional to the actual length of the question, so that’s a cool feauture. I wonder if that would also work if you were doing quizzes that were about different things, like maths or japanese.”

User 2: “Everything is quite accurate to what I wanted for the chat feature, but can I make it a point that the players can still see the chat? In case the teacher maybe put important information in it or something.”

User 3: “The use cases are good in general, but I would probably want to be able to turn the chat feaure on and off, not just off once and have it be locked permanently. Or maybe just turn it off for particular students/players.”

Adjustments made:

- Let the update be optional, rather than for all quizzes.
- Explicitly let players view the chat even when it is disabled.
- Toggle the chat feature not just disable it.

Adjustments are shown in the use cases, where crossed out words were the original suggestion, and words that have been italicised and underlined are the new changes.

Name:	Update question time limit
Primary Actor:	The admin user
Background Information:	We are changing the way that we organise question reading time limits, specifically in the question_countdown stage. Currently the admin who creates the question simply sets a number as the timelimit, but ~~now~~ *with this optional update* it will be more dynamic and proportional to the length of the question itself
Rationale:	This change is based off of feedback we received from potential users who said they had difficulty reading the questions in time
Preconditions:	A logged in admin user ~~creates a valid question, not including a timelimit,~~ *provides an existing quiz that they own*. Additionally, including the newly generated timelimit, the sum of all question timelimits are under 3 minutes
End Conditions:	Successful end – ~~The question~~ *All question’s in the quiz have their* timelimit for the question_countdown stage updated successfully Failed end - The ~~question~~ *quiz and its question* timelimit*s* do~~es~~ not change
User Functionality:	~~The user does not have to do anything other than create questions~~ *When the user views a quiz there is now a button called ‘Smart Timelimit’, pressing this simply updates the question timelimits*

Future Planning Document

Name:	~~Disable~~ *Toggle* the chat feature
Primary Actor:	The admin user and players
Background Information:	Currently players can view and send messages in a chat to all players in an active quiz session.
Rationale:	This change is based off of feedback we received from potential users who said they would want to be able to ~~disable~~ *toggle* the chat feature so that players would be more focused. This is particularly useful for classroom applications of toohak
Preconditions:	An admin user is logged in, and a valid quiz session has started, it can be in any stage*. For disabling the chat feature, the chat must be active and vice versa for re-enabling the chat*
End Conditions:	Successful end – Players can no longer send messages in the chat*, viewing it is still possible. Or players can send and view messages again* Failed end – Players can use the chat feature as ~~normal~~ *before*
User Functionality:	The admin user presses a button to ~~disable~~ *toggle* the chat feature at any point during an active quiz session. ~~Players can no longer send messages~~ *Players' chat permissions update accordingly*

Interface Design –

Design Interface Routes

HTTP Endpoints for suggested solutions from the planning pdf

PUT `/v1/admin/quiz/{quizid}/timelimit` Update the timelimit to be proportional to question length

PUT `/v1/admin/quiz/{quizid}/session/{sessionid}/chat` Toggle the chat feature for an active session

PUT `/v1/admin/quiz/{quizid}/timelimit` Update the timelimit to be proportional to question length

Update the timelimit for each question within the quiz, to be proportional to the length of the current question. Also updates overall timelimit for the quiz

Parameters Try it out

Name	Description
quizid * required (path)	5546
token * required (header)	token

Responses Response content type application/json

Code	Description
200	OK Example Value | Model `{}`
400	The sum of the updated question timeLimits in the quiz exceeds 3 minutes Example Value | Model `{ "error": "Specific error message here" }`
401	Token is empty or invalid (does not refer to valid logged in user) Example Value | Model `{ "error": "Specific error message here" }`
403	Valid token is provided, but user is not an owner of this quiz or quiz doesn't exist Example Value | Model `{ "error": "Specific error message here" }`

PUT `/v1/admin/quiz/{quizid}/session/{sessionid}/chat` Toggle the chat feature for an active session

Turn on or off the chat feaure for players depending on the current state of the cha, it should be possible at any session stage. Players can view the chat either way

Parameters Try it out

Name	Description
quizid * required *(path)*	5546
sessionid * required *(path)*	5546
token * required *(header)*	token

Responses Response content type application/json

Code	Description
200	OK **Example Value** | Model `{}`
400	**Example Value** | Model `{ "error": "Specific error message here" }`
401	Token is empty or invalid (does not refer to valid logged in user session) **Example Value** | Model `{ "error": "Specific error message here" }`
403	Valid token is provided, but user is not an owner of this quiz or quiz doesn't exist **Example Value** | Model `{ "error": "Specific error message here" }`
